Liquid Fence Company Introduces Eco-Friendly Biodegradable Mole Repellent Worms

(Brodheadsville, PA) To combat destructive moles in a humane, earth-friendly manner, The Liquid Fence Company has added Mole Repellent Worms to its expanding line of easy-to-use, all-natural products.

These biodegradable worms are made of “real food” and impregnated with all-natural Liquid Fence Mole Repellent. Because the worms mimic a natural food source, Mole Worms are an irresistible taste-treat for moles.

Once ingested, the ingredients disrupt the mole’s normal digestive functions, forcing these destructive nuisances to look elsewhere for food and move on to someone else’s yard or garden.

The Mole Worms are lab-tested and guaranteed to virtually eliminate the habitation of moles and the unsightly and potentially hazardous conditions they create in lawns, landscaped garden areas and flowerbeds, or your money is refunded.

These earth-friendly Mole Worms were developed in partnership with FoodSource Lure Corporation, one of the leading developers of commercialized fishing lure technology.

“We couldn’t have found a better production partner for our humane Mole Repellent Worm product than FoodSource Lure Corporation,” says Eddie Abraham, president of Liquid Fence.

“Liquid Fence’s experts told us what consumers needed to fight ground moles, and together we designed a product to meet those specifications,” said Ed Rogers, FoodSource’s co-founder and president. “Our unique food ingredient blends are a versatile delivery vehicles for scents, pharmaceuticals and other materials.”

In addition to the flagship product Liquid Fence® Deer & Rabbit Repellent, other Liquid Fence eco-safe, cruelty-free animal repellents include: Goose Repellent, Mole Repellent, Dog and Cat Repellent and Snake Repellent.

The Company also makes a Liquid Net® family of DEET-free botanical “Ultimate Insect Repellents” for people, pets and horses, an organic kelp plant “booster” aptly named Speedy Grow®, and are exclusive distributors of CowPots, the biodegradable pot made from cow manure.

Earth-friendly Mole Worms were first developed for commercialized fishing lures by FoodSource Lure Corporation, one of the leading manufacturers of biodegradable fishing lures.
